Oct 4, 2017 Introduction to the Datacard ID Works standard product. Datacard ID Works Standard Version 4.0. Datacard ID Works 6.5 for VSE B is available on the Datacard web site now. but have on occasion gotten the following error when trying to use this product with an external monitor.Launched earlier this year, Theranos Inc. has taken the world of blood testing by storm. Unlike other options, they do not require sampling whole blood and the company has quickly made a name for themselves. While early signs are positive, as they still claim to have developed products that achieve near 100 percent of accuracy and are clinically accurate, people have been sounding the alarm on Twitter for some time. A number of negative articles have been published on the company's true viability, including Forbes, The New York Times and The Wall Street Journal. After the debacle that is the OIG investigation, the company did not just fall but plummeted straight to the bottom of the market. They were unable to produce a regulation compliant system for the FDA that has not been tweaked and there were

---

many product development bottlenecks, like nobody working on the quality control team which was over 90% empty. The CEO, Elizabeth Holmes, bought \$10 million worth of the company last December. Her total worth at that time was \$180 million, but the company is now valued at \$1.7 billion, up over 60% and the stock is selling for \$1. And with many checking on the accuracy of the previously reported claims, The Wall Street Journal reports that the company not only couldn't back up their performance claims, but have previously lied to investors. Theranos Analysis: How Theranos Delusions Happened There is some good news for investors. Many of the company's liabilities, such as their misleading advertising (see graphic) were not caused by the analytical results the company produces but instead by their deceptively named 'synthetic' samples. However, according to The Wall Street Journal, the company used unapproved and 'proprietary' reagents, dilution and sample preparation methods. The company's results were highly misleading and many potential investors have ended up feeling fleeced. What is their Valuation? The Journal quotes an unnamed official who was familiar with the situation saying that 'the company's total liabilities are between \$ f678ea9f9e
